Elements
Void pattern tool
A lot a styling fun

Not included

Glue
Needed

Glue
Level
Pencil
Ruler
Filler knife (demontage)
Battery (MonoClock)
Screwdriver (MonoLight)
Hex key (MonoLight)
Before you start

All elements should have the point facing upwards. This is the “first law” of Valence styling. This way you can ensure that you can always hang a Hook, Mono-Planter or MonoFlame within the wall system.
Check the style guide before you create your wall decoration.
Hexagons always point up
The length of the jackets determines the height of the PentaHook.
The eye height should be in the middle of the Mirror.
Start with the installation of the MonoLight when you bought one.
Place Mono-Flames and MonoPlanters out of reach of kids and pets.
The MonoFlame and Mono-Planter can only be fixed in one way.
Mirrors, chalkboard and whiteboard have a protective cover. Remove it after installation to keep the element clean.
Organize your elements on a flat surface before you fix them to the wall.
Select the best glue for your wall/application and follow the manual. We have had overall good results with Polymaxx Crystal Clear from Bison.
Some thoughts on glue.

Acid free. Better for the environment and will not damage the mirrors.

Stays elastic.

Keep the glue near the sides of the elements to make removing easier.

When in doubt, ask a local professional or consult Valence.

Don’t use too much.
All methods of application will leave a mark on the wall. The amount of damage depends on the plaster, glue, how much glue you used and how careful you are when removing.
Step by step

Place the first element on the wall at the desired height.
2

Step by step

Use a level to make sure the element is leveled. Mark some of the corners on the wall with a pencil.
Tip: First mount the PentaMirror and then remove the foil.
Add the glue to the back of the element and place the element to the wall.

Step by step
Tip:
Keep the glue near the sides of the elements to make removing easier.
Step by step

Press the element firmly to the wall.

Please keep in mind that the time required depends on the glue, wall, temperature, humidity, weight and material of the element.
5

Step by step

Place the next element to the wall. Make sure to connect the sides seamlessly to the previously fixed element.
Occasionally check with the level if you are still levelled. Repeat step 4 and 5.
Removing the elements
When an elastic glue was used.

Use a filling knife to carefully cut through the glue from the sides of the element. Carefully remove the elements one by one. Remove the glue from the wall by hand or using the filling knife.
RETURN

When you have no use for the elements in a new wall decoration. You can contact Valence to arrange the return of these elements. People with a distance to the labor market have a great time bringing the elements back in shape.
Elements that have been cleared are used in commercial projects with a circular goal. Some elements can be used over and over again. Others are more likely to deter.
When an element is not fit to be used again, we recycle the material. Preferably by the manufacturer of the material to minimize waste. The Valence elements are all made of only one material. This makes recycling more efficient.
Check the Dux style, the style guide for the six valence laws.
